

How is the film produced from recycled PET bottles made?

The Poles produce more than 10 million tons of garbage each year, only 18% of which is recycled

PET flakes undergo a chemical process of cleaning with the use of Starlinger deCON technology

EkoPet is made – a raw material that meets EFSA requirements about materials in contact with food

Eurocast can use 90 % of EkoPet and 10% of the virgin raw material for the production of film
